Find Books on the Shelf

1. The first character is always a letter. This indicates the section where you can find the book.
2. There may be a second letter after the first character. This tells you to move past all the "B" books and find "BA."
3. Once in the proper section, look for the number. It starts at 1, and goes up.
4. After you get to the number, look at the letter after the decimal. Find the letter.
5. The next numbers are decimals; .B16 comes before .B2.
6. The last part of the label may have a publication year, but not always. This is important if you are looking for a specific edition of a book.
